

Nolin D Naidoo

linkedin.com/in/nolindnaidoo | github.com/nolindnaidoo | nolindnaidoo.com | splitwinner.com |

I am a Chief Engineer with 15 years of hands-on engineering across consumer and enterprise technology — frontend precision to backend scale, now building production AI/ML systems end to end. I have delivered mission-critical platforms for Fortune 10 banking, the Department of Defense, global automotive retail, and state government, mentoring 100+ engineers along the way. In the open I maintain 12 developer tools past 76,000 installs across the VS Code Marketplace and Open VSX, 10 Model Context Protocol servers on the official MCP Registry, and 2 Rust CLI tools on crates.io — every release carrying Sigstore provenance anyone can verify. I have 10,000+ hours of agent-assisted engineering since the earliest coding models, top 3% of Cursor users worldwide in 2025, and I write the standards that make generated code land at the same bar as hand-written — enforced in CI, not trusted. Claims are proven, not asserted.

EXPERIENCE

Founder & Chief Engineer — SplitWinner (Formerly OffensiveEdge)

May 2022 - Present, Dallas, TX (Full-Time, Hybrid)

- Architected and built an end-to-end machine learning platform — data ingestion, feature pipelines, model training, serving, and a public verification layer — running 16 production models across 6 sports on a daily training-to-serving cycle.
- Engineered the industry's only public prediction audit trail: every prediction hashed and Bitcoin-anchored before kickoff into an append-only ledger, independently verifiable by anyone with a single pure-stdlib Python file, no account required.
- Delivered calibrated probability models with conformal prediction sets, proven in a five-week public live alpha — 530 picks anchored, skips disclosed, nothing deleted, record sealed and archived.
- Built the production REST API (TypeScript, Hono, Vercel) as the exclusive data seam for untrusted clients — versioned contract, OpenAPI specification, HMAC request signing, tiered B2B authorization, column allow-lists, and 1,100+ automated tests behind an enforced coverage floor.
- Shipped a white-label React Native desk terminal (Expo, TypeScript) distributed privately to trading desks — server-side redaction, TLS certificate pinning, device-integrity gating, 25 localizations, and 1,350+ automated tests.
- Chief Engineer for a three-person engineering organization through the OffensiveEdge years; sole engineer across all six repositories since the 2026 relaunch — ML platform, public API, mobile terminal, marketing site, ops console, and the public audit trail — at 4,000+ engineering hours a year with concurrent multi-agent delivery.
- Authored per-repository agent instruction standards enforced by CI — commit format, coverage floors, accessibility gates, payload budgets, and visual baselines — so agent-generated code meets the same bar as hand-written or it does not merge.

Technology: Python, TypeScript, Rust, PyTorch, TensorFlow, scikit-learn, MLflow, ONNX, MLOps, agentic systems, LangChain, LangGraph, Langfuse, MCP, RAG, pgvector, Node.js, Hono, Next.js, React, React Native, Expo, Supabase, PostgreSQL, Redis, Docker, n8n, Vercel, GitHub Actions, Playwright, Vitest, Bun

Principal Consultant — Multi-Industry Enterprise Systems — Robert Half

Feb 2014 - Jun 2022, United States (Contract, Remote & On-site)

- Delivered multi-industry enterprise systems as a principal consultant specializing in web, mobile, OS-native, and embedded platforms, extended to AI-enabled and MLOps-driven architectures.
- Led large-scale migrations from legacy stacks to React, Node.js, and TypeScript architectures across automotive, logistics, and finance clients, improving performance, maintainability, and developer velocity.
- Designed accessibility-compliant UI systems (ADA / WCAG 2.1) adopted across multiple Fortune 500 portfolios.
- Architected AutoML ensemble pipelines with AWS SageMaker and AutoGluon, introducing scalable orchestration and automated model versioning alongside existing full-stack deployments.
- Integrated MLOps orchestration into CI/CD workflows (Jenkins, AWS CodePipeline, Docker), enabling parallel automation of application and model deployments and cutting release cycles by 50%.
- Mentored 70+ developers through architecture reviews, DevOps adoption, and front-to-back integration between microservices and ML APIs.

Clients: MHT Transportation, General Motors, T. Rowe Price, Brierley + Partners, L3Harris Technologies

Technology: React, TypeScript, Node.js, GraphQL, Docker, AWS, Jenkins, SageMaker, AutoGluon, TensorFlow, Redis

Principal Solutions Engineer — Dealer Direct & Carvis (Creator) — RumbleOn

Nov 2018 - Jan 2019, Irving, TX (Contract, Hybrid)

- Architected and delivered React Native cross-platform applications for car and motorcycle purchasing, unifying mobile, tablet, and web flows on shared AWS back-end services.
- Built a serverless AppSync and GraphQL framework that reduced AWS spend by 75% (\$40K to \$10K monthly) while improving scalability and real-time responsiveness.
- Implemented full-spectrum automated testing (unit through end-to-end) with Mocha, Jest, and Selenium, stabilizing CI/CD and eliminating release regressions.
- Led UX modernization to a user-centric digital retail journey, increasing lead-to-sale conversion by 22%.
- Integrated AWS ML Kit for intelligent vehicle recognition, dynamic pricing, and VIN decoding directly within the React Native application.

Technology: React Native, AWS (AppSync, ML Kit, Lambda, CloudFormation), GraphQL, Firebase, Node.js, Python, Redux, Domo, Sentry

Principal Product Engineer — IAS Marketplace — Integrated Auction Solutions

Dec 2017 - Nov 2018, Austin, TX (Full-Time)

- Re-architected a legacy monolithic platform exceeding one million lines of code, reducing dependencies by 50% and improving average page load time by 75%.
- Introduced 87 GraphQL types to replace fragmented REST endpoints, establishing a unified schema for both web and React Native clients.
- Built a reusable enterprise component library (React, Semantic UI, Storybook) that accelerated feature delivery across multiple product teams.

- Led hands-on React Native development for dealer-facing mobile dashboards and inventory workflows, ensuring full parity with the new GraphQL data layer.
- Improved Agile velocity by 29% per sprint through optimized backlog management, mentorship, and code-driven process refinement.

Technology: GCP, Firebase, Node.js, Express, GraphQL, React, React Native, Docker, Kubernetes, Jenkins

Senior Frontend Engineer — GM Shop Click Drive — General Motors

May 2017 - Jan 2018, Austin, TX (Contract)

- Shipped the first way to buy a car outright on a major manufacturer's own website — direct-to-consumer sales across Chevrolet, GMC, Buick, and Cadillac, in production 2017.
- Modernized the legacy ASP.NET and AngularJS frontend architecture for performance, maintainability, and UX consistency, increasing Google Page Speed by 90%.
- Rebuilt testing and delivery pipelines with Selenium, Karma, Mocha, and Jenkins, integrating full CI/CD for automated regression coverage.
- Refactored core modules for accessibility, cross-browser stability, and analytics instrumentation.
- Mentored 18+ engineers and contractors on modern JavaScript patterns, modular architecture, and QA automation best practices.

Technology: ASP.NET, AngularJS, Webpack, Selenium, Karma, Mocha, Chai, Sinon, TFS, Jenkins

Senior Solutions Engineer — Communication Systems — L3Harris Technologies

(Department of Defense) Oct 2016 - Jun 2017, Clifton, NJ (Contract, Hybrid)

- Architected the first Node.js application ever put into service in the Department of Defense, on a stack that had never cleared it.
- Delivered 80% automated test coverage on defense-grade communication platforms, from a starting point of zero.
- Led 40 remote engineers transitioning from strictly-typed C# to the React and Redux ecosystem.
- Standardized a React-INTL localization framework adopted enterprise-wide.

Technology: Java, React, Redux, Node.js, Material Design, Jenkins, Mocha, Enzyme, Chai, Sinon, Maven, Hudson

Senior Frontend Engineer — Consumer Loyalty — Brierley + Partners

Mar 2016 - Sep 2016, Frisco, TX (Contract)

- Architected migration from Oracle and PostgreSQL to a MongoDB API, improving data retrieval by 40%.
- Reduced installation time of enterprise loyalty software from 2 days to 20 minutes.
- Delivered a next-generation Angular front end adopted across multiple global loyalty programs.

Technology: Angular, Node.js, MongoDB, PostgreSQL, Oracle, IBM StrongLoop, Swagger, [ASP.NET](#)

Senior Compliance Consultant — ADA, WCAG, 508, i18N — T. Rowe Price

Oct 2015 - Jan 2016, Baltimore, MD (Contract, On-site)

- Directed the ADA Remediation Pilot, identifying and resolving 500+ accessibility issues through automated testing, manual auditing, and assistive technology testing.
- Deployed 15+ global localizations via Granite i18N.
- Refactored AEM component trees into modular, reusable structures for enterprise adoption.

Technology: AEM, ASP.NET, TFS, SQL, JSX, HTML5, CSS3, Wave, Axe, Pa11y, AMP, SOAP

Senior User Experience Consultant — Cognitive Psychology — Kofile Technologies

Feb 2015 - Oct 2015, Dallas, TX (Contract, On-site)

- Implemented full ADA and WCAG compliance across Texas state digital records systems.
- Reframed UX from business-centric to human-centric journeys, increasing task completion by 34%.
- Educated product managers on usability testing and accessibility as core product principles.

Technology: ASP.NET, SQL, XML, JavaScript, HTML5, CSS3, Wave, Axe, Pa11y, SOAP, UXPin, Adobe XD

Senior Frontend Engineer — Flagship Team CMH1 — JPMorgan Chase & Co.

Sep 2014 - Feb 2015, Columbus, OH (Contract, On-site)

- Pioneered the first single-page application in banking — chase.com and the Chase mobile app — as one of six engineers on the flagship team of a 300+ engineer division at a Fortune 10 institution.
- Removed jQuery entirely from the bridge, controller, and view layers, reducing codebase size by 30% and improving maintainability across shared components.
- Consolidated repetitive controller logic into reusable factories and services, cutting code duplication by 60%.
- Optimized CI/CD pipelines, cutting build times by 10 minutes per deploy through efficient dependency handling and modularization.
- Implemented responsive HTML5 and CSS3 design for cross-browser compatibility, and unified front-end standards across multiple development teams.

Technology: JavaScript, Node.js, Ember.js, Knockout.js, Handlebars, Mustache, jQuery, Swagger, JSON, YAML, HTML5, CSS3, Atlassian, Jira, Confluence, Bamboo, Bitbucket, REST

Partner & Lead Developer — Healthcare, EMS — Polylingo / MedLingo

Jan 2011 - Aug 2013, Frisco, TX (Full-Time)

- Joined as lead developer on the first multilingual EMS communication platform — winner of the Texas Fire Chief's Lone Star Achievement Award and the EMS World Top Innovation Award — and became an equal 50/50 partner in the company.
- Led development of a HIPAA-compliant, real-time language translation and reporting system bridging first responders and hospitals, adopted across Texas fire departments and nationwide.
- Delivered full-stack iOS applications from concept to App Store deployment, achieving 70% faster field-to-hospital data relay.
- Owned system architecture, API integration, and data-security compliance through to the company's acquisition by ESO Solutions.

Technology: macOS, iOS, Xcode, Objective-C, Swift, JSON, XML, Plist, App Store

SKILL

Production ML Systems (training to serving)
Probability Calibration & Conformal Prediction
Agentic Systems & Model Context Protocol (MCP)
Agent-Assisted Engineering at Enterprise Scale
Verifiable Systems & Cryptographic Provenance
Software Architecture & Enterprise Migration

API Contract Design & Governance
Machine Learning Operations (MLOps)
Test & Release Engineering
Accessibility as a Build Gate (ADA / WCAG / 508)
Technical Leadership & Architecture Review
Team Development & Mentoring
Strategic Communication

TECHNOLOGY

AI, Machine Learning & MLOps

Python, PyTorch, TensorFlow, scikit-learn, MLflow, ONNX, AutoML, AWS SageMaker, AutoGluon, model registry, model serving, inference optimization, probability calibration, conformal prediction, evaluation harnesses, agentic systems, LangChain, LangGraph, Langfuse, Model Context Protocol (MCP), RAG, pgvector, vector databases

Verifiable Systems & Provenance

Content-addressed artifacts, SHA-256 integrity chains, append-only audit trails, OpenTimestamps, Bitcoin anchoring, point-in-time correctness, Sigstore release provenance, HMAC request signing, reproducible builds

Languages & Runtimes

TypeScript, Python, Rust, JavaScript, Node.js, Bun, SQL

Product Surfaces

React, React Native, Expo, Next.js, Svelte, SvelteKit, Hono, Express, Redux, Zod, Tailwind CSS, HeroUI, Material Design, Recharts, GraphQL, REST, OpenAPI / Swagger

Data & Infrastructure

PostgreSQL, Supabase, Redis, pgvector, SQLite, DynamoDB, Amazon Web Services (AWS), Vercel, Cloudflare, Docker, Kubernetes, Terraform, n8n, PM2, NGINX, GitHub Actions, Jenkins, CircleCI, Vite, Turbopack, Cargo, Metro Bundler

Quality & Compliance Engineering

Vitest, Jest, Playwright, Maestro, Selenium, mutation testing, coverage gates, visual regression, axe-core, Lighthouse, Sentry, Biome, ESLint, ADA, WCAG 2.1 / 2.2, Section 508, HIPAA, i18n / l10n, assistive technology testing

AI-Assisted Engineering

Claude Code, Cursor, Zed, GitHub Copilot, multi-agent orchestration, agent instruction standards (AGENTS.md) enforced in CI, MCP server authoring, prompt and context engineering, automated code review gates
